

## Helpful Online Resources for Living With AFib

by ANGELA FINLAY

---

### Where to Go for AFib Info, Care, and Support

There is a host of supportive AFib resources out there. Depending on what you need to find or learn, some will certainly prove more useful than others. Since there are so many websites, organizations, and forums to browse through, it can take a while to find the right repository of facts and support for you, but you can start your search with a few reliable websites.

All you need is an internet connection and some time to explore these excellent tools to make life with AFib a little easier.

### Blogs to Follow

Sometimes the best resources are the ones that are constantly updated, and that's especially true when it comes to serious health conditions. There are new developments in AFib research and treatment all the time, and the better you can keep up, the more control you can take over your heart health.

Blogs can be a great place to get accessible info, and connect to other people that know what you're going through. Check out these blogs that combine a good arsenal of accurate info with a personal, creative touch:

- **StopAFib Blog** – The blog at StopAFib.org is run by Melanie True Hills, a heart health expert and accomplished author, which explains the wealth of thorough and helpful information you'll find there. Visit [atrialfibrillationblog.com](http://atrialfibrillationblog.com) to browse through the well-organized features, and there's a forum to share stories and get advice from other AFib patients. This is the place to come for the latest news on advances in treatment, experimental trials, medication discounts, and even patient conferences.
- **Cardiac Health** – Run by Dr. Tryzelaar, a retired cardiac surgeon, this blog is a comprehensive compilation of patient questions (and doctor's answers), latest news on heart conditions, clearly written articles on heart health, and even resources for doctors and health professionals. It's clear that Dr. Tryzelaar wants to help his heart-conscious community as best he can, and he even maintains a section on heart healthy living that includes the expert opinions of a nutritionist and chef.
- **AFib Runner** – If you're an AFib patient who's also a fitness enthusiast (or simply doing your best to stay in shape), you'll want to check out Michal McCullough's blog. He's not a cardiologist (he happens to be a doctor, but of podiatry), but he has a lot of first-hand experience and information on staying active with AFib. Inspiring, motivating, and enlightening, this blog deserves your attention – and may even help you improve your heart fitness.

There are many, many blogs out there that could help you sort through your questions, concerns, and feelings. Spend some time investigating other recommended blogs by following some links you find on these reputable AFib websites.

*Next page: best resources for technical info and support*

## **Get Technical Info for a Deeper Understanding**

Technical medical writing isn't exactly the Sunday paper, but it can be helpful when you need some detailed answers or trusted reassurance. In fact, some sites are the perfect complement to your doctor and hospital visits, especially when you find test results difficult to interpret, or you haven't received the explanation you were hoping for in person.

- **Journal of Atrial Fibrillation (JAFIB)** – This is an online medical journal for the masses: it contains a large amount of peer-reviewed research, editorials, case reports, and anecdotal information from doctors. If you're up for an enlightening lesson in the medical aspects and challenges of AFib, you'll have your pick of articles; those who prefer something more direct and accessible will appreciate the sections like "Meet the Expert Doctor" and "Patient Corner", where you can get straightforward answers and good direction for care givers.
- **Medscape Cardiology** – Medscape's cardiology section is a wonderful one-stop shop for info on heart health, featuring an array of topics on different heart conditions. News, editorials, and experts columns are updated regularly, and patients can get new and clear insights into AFib care. Given that the website is devoted to general heart health, there is quite a bit of extra info on this site, but it does offer a lot of relevant info for those willing to put in a few extra minutes.
- **Learn the Heart** – Created, compiled and maintained by heart doctor Steven Lome, this website has a huge amount of quality information about cardiovascular medicine and heart health. There is a good deal of professionally-oriented medical info, but all patients can access and enjoy the quizzes and memory exercises, and you may find that the numerous articles on ECG interpretation help you understand your own test results.

## **Build Your Support Network**

Doctors and AFib patients alike will agree that a strong support network can make a huge difference in how you live with your disease and handle the challenges that come your way. If you're feeling isolated or disconnected, connect to other people who understand what you're feeling, and can offer comforting conversation online or in person.

- **CardioSmart** – The American College of Cardiology has put together a great website for patients with heart conditions, and their caregivers. An array of tools like risk calculators and mobile Atrial Fibrillation apps can help you keep on top of your self-care, but it's also a meeting place for the Afib community. Join a discussion in the forum, or connect with other people affected by heart conditions through Mended Hearts, a network of volunteer-run support groups, in-hospital visits, and health education workshops.
- **Daily Strength AFib support group** – Daily Strength is one of the best places to go for online forums surrounding a variety of health conditions. The section on Afib is no exception, with a range of open discussion and experts answers, plus an active and caring community to lean on. Since there are so many members, lots of topics are continually updated, which means your thoughts and questions are more likely to draw timely answers than they would on some other sites.
- **Heart Rhythm Society** – If you're on the hunt for a new doctor or need some help finding a specialist, you can visit the Heart Rhythm Society website to search for suitable physicians. You can narrow your search to a specific state or a few specialties, and while you're there, check out the patient information sheets for good info on AFib treatment.

The more proactive you are in your self-care and Afib education, the more you will get out of support groups and forums. Keep an open mind and a bright attitude, and you'll make new friends and strengthen your network of support before you know it.
